**Bron Grieve,
Community Health Nurse**

Hi, through my teaching of first aid I have realised there are very few defibrillators in and around Castlemaine.

I am trying to get a free defibrillator to put in a central area that has out of hours access in Castlemaine.

A defibrillator or AED has been shown to be one of the most important things to have if someone has a cardiac arrest; it is the one that gives the heart an electric shock to try to restart it, but it needs to be used very quickly to give the person the best chance of survival, which is why I am trying to get more accessible ones!

This petition is on the CDCH face book page, or you could kindly click on the below link, sign the petition with your details, and CDCH will go in the running for a free defibrillator.
